Professional Summary

Senior Full-Stack Engineer with 6+ years designing and scaling SaaS platforms for US and EU clients. Led production AI integrations (Google Vertex AI, AWS Bedrock) and infrastructure optimizations saving \$600–1.2K annually per customer. Strong expertise in Java/Spring Boot microservices, distributed systems, and JVM performance engineering for high-reliability platforms serving 24,000+ users with 99.99% Service Level Agreement (SLA) uptime.

Professional Experience

- **Cefalo (Offshore branch of Cefalo AS, Norway)** Dhaka, Bangladesh
Senior Software Engineer Sept 2022 - Present
 - **AI Call Intelligence Platform:** Led design and deployment of Google Vertex AI (Gemini 1.5) speech-to-text and conversation-summary workflows across Java backend services and customer activity UI flows; owned single/batch audio pipelines, API contracts, transcript/summary actions, and evaluation-quality hardening
 - **Backend Contract Hardening:** Hardened immutable Java domain models and DAO boundaries by replacing nullable API states with explicit Optional handling, standardizing SQL bindings through shared utilities, and validating focused DAO/service paths
 - **Database Optimization & Risk Mitigation:** Eliminated 68M unused database records (50–100 GB), preventing recurring AWS ec2 instance upsizing and saving \$600–1,200 annually per customer; proactively mitigated storage exhaustion risk, preventing potential production outages
 - **Performance & Operational Stability:** Removed 8 unnecessary database triggers, reducing write amplification and improving backup performance by 10–20%; eliminated 12–24 hours of annual manual disk management
 - **Zero-Downtime Migration Strategy:** Designed phased migration framework with automated validation and rollback safeguards to ensure safe production deployment
 - **Distributed Systems Delivery:** Maintained Java (JAX-RS – Java API for RESTful Web Services) microservices and Vue.js/TypeScript frontends for LeadDesk Contact Platform as a Service (CPaaS) / Contact Center as a Service (CCaaS) platform serving 24,000+ users with 99.99% uptime
 - **Cross-Border Collaboration:** Partnered with Norway-based stakeholders to translate business requirements into scalable technical solutions aligned with product roadmap
- **Brain Station 23** Dhaka, Bangladesh
Software Engineer Dec 2020 - Sept 2022
 - **Backend System Design:** Built production-grade Spring Boot REST APIs using Spring Data Java Persistence API (JPA) / Hibernate with strong domain modeling and transactional integrity
 - **Multi-Tenant Security Architecture:** Designed and implemented custom authentication and authorization system supporting hierarchical roles across tenant boundaries
 - **Payment Systems Integration:** Integrated Stripe billing workflows (product catalog, transactions, provisioning) ensuring accurate financial flows
 - **Quality Engineering:** Expanded automated test coverage (JUnit, Mockito), reducing production defects and accelerating delivery velocity
 - **Enterprise Platform Contribution:** Contributed to AbbviePro multi-tenant healthcare platform (Adobe Experience Manager) with Java backend and AngularJS frontend
- **Welldev** Dhaka, Bangladesh
Junior Software Engineer Sept 2019 - Nov 2020
 - **Frontend Engineering:** Built responsive chatbot interface using Vue.js/Nuxt.js with structured state management (Vuex/VuexORM)
 - **Backend API Development:** Developed RESTful services using Spring Boot and PostgreSQL
 - **UI System Design:** Built Storybook component library to standardize UI and accelerate development
 - **DevOps Foundations:** Dockerized development environments to ensure reproducible builds and reduce onboarding friction

Selected Independent Projects & Technical Writing

- **100DaysOfJava / Java Learning Atlas:** Built and published a Java learning archive with an interactive knowledge graph mapping Java topics across JVM internals, performance, concurrency, security, streams, and AI experiments
- **Rent Management Platform:** Built a Dockerized Spring Boot/PostgreSQL rent-management application with environment-driven configuration, backend API wiring, and Android-client connectivity debugging
- **Applied Java Systems Writing:** Baeldung contributor and author of hands-on Java/Spring articles and labs covering Java Microbenchmark Harness (JMH), Java Management Extensions (JMX), heap analysis, TLS/JSSE, idempotent APIs, consistent hashing, sandboxing, and Spring AI/RAG prototypes

Technical Skills

Languages	Java, JavaScript, TypeScript, SQL, Python, HTML, CSS, Erlang
Backend	Spring Boot, Spring Security, Jersey (JAX-RS), Spring Data JPA, JDBC, REST APIs, Microservices
Frontend	Vue.js, Nuxt.js, Vuex, AngularJS
AI/ML	Google Vertex AI, Gemini 1.5, AWS Bedrock, Spring AI (prototypes), Retrieval-Augmented Generation (RAG), LLM Integration, Vector Databases
Cloud & DevOps	AWS (RDS, Bedrock), Docker, Docker Compose, GitHub Actions, CI/CD
Databases	PostgreSQL, SQL Optimization, Database Migration
Performance	JMH Microbenchmarking, JMX Monitoring, VisualVM, Eclipse MAT, Heap Analysis, GC Tuning
Security	TLS/JSSE, OAuth2, JWT, Secure Sandboxing
Testing	JUnit, Mockito, Jest, Vue Test Utils, Integration Testing, Selenium

Education

- **BRAC University** Dhaka, Bangladesh
Bachelor of Science in Computer Science 2019
